

 **The advantages:**

- *Convenient and handy*
- *Easy to use*
- *Easy to clean*
- *Autoclavable*

.....
Greatly appreciated in the pharmaceutical industry for micro biological sampling, this horizontal spear is useful for taking quickly small samples in the form of powders and granules.

Completely made of 316L stainless steel and manufactured in one bloc it doesn't offer any edges or undercuts in which residual sample material can lodge and is easy to clean and sterilise.

The solid pointed tip of the probe allows an easy penetration into a paper or plastic sack. Sample quantities up to 50cc can be taken in a fast and simple way : after collecting the samples into the sampling chamber, the powders pass directly and securely through the hollow handle into the sample bag thus avoiding the risk of contamination

- *Material : 316L stainless steel*
 - *Total length : 400mm - sampling depth : 200mm*
 - *Hand grip diameter : 25mm - Point perforation diameter : 20mm*
 - *Theoretical volume of the sampling chamber : 50cc*
 - *Weight of the probe : 200gr*
-
